

## Press Release

---

### *New Product from Gunnebo Lifting - Master Link Hybrid*

Early this year Gunnebo Lifting announced a new product to their range – the Master Link Hybrid (MFH). The product is completely new and unique on the market, designed to fit perfectly on DIN 15401 crane hooks.

The top part of the master link has an extended radius, allowing a perfect fit on the crane hook. This minimizes the wear and tear of both the master link and the crane hook, which otherwise can lead to corrosion and a shorter product life span.

Unlike the pear-shaped master link, the MFH has parallel legs offering generous space to connect multiple legs which also makes the assembly easier for the user.

The lower half of the master link is rounded and this allows the load to automatically center with every lift, increasing balance and a safer working situation. The risk of tilting is completely eliminated.

This new master link has been warmly welcomed by the crane industry and is becoming a great success for Gunnebo Lifting.
